To whom it may concern,

It is with without reservation that I recommend the Bio-Cascade CAP Clean Air Plant System. We service and repair diesel locomotives in our MBTA Commuter Rail Maintenance Facility and therefore produce a large amount of diesel exhaust fumes as well as particulates which infiltrate into the office areas. The office personnel noticed a major difference in the air quality with the CAP90 installed in the office area. We also tested the particulate levels in the office areas and found that particulate levels dropped dramatically.

Many office personnel complained about headaches and nausea when the diesel fumes were migrating into the offices but when the CAP90 unit was installed complaints virtually disappeared. If you need to lower particulate levels as well as VOC's, then a Bio-Cascade unit is my recommendation.

Sincerely,

Thomas J. Ford
Senior Facilities Engineer
